

Adrián Anta

Software Engineer based in Galicia, Spain.

Experience

DLTCode (current) · Software Engineer

October 2025 – Present

- Rebuilt an education platform from scratch; participated on the design of a multi-tenant configurable theming system (colors, border radius, typography, spacing and others).
- Delivered a second multi-tenant platform (CTF-style product) under tight deadlines, including same-day fixes ahead of live client demos.
- Currently building two internal component libraries (core logic + themed styles) published to a private npm registry, using Tailwind and Storybook.
- Strong Git/GitHub practices: branching, PRs, code review. Often the team's reference on Git.

Client-Facing Store · Sales & Operations

November 2025 – May 2026

- Sales, service, and daily operations; alongside my full-time engineering job. Adding up to 13 h weekdays for three months, then 10 h for three more, without slipping on either.

Bahia Software (internship) · Software Engineering Intern

March 2025 – June 2025

- Worked within a legacy Java / Spring Boot codebase where I prototyped LLM integration into an existing production application in the medical field.

Projects

Desktop Automation App · Electron (macOS / Windows)

April 2026 – Present

- Built and shipped a Windows / macOS app automating contract generation from templates and spreadsheet data for a real lawyer; scope grew to Google Drive sync, DeepL translation, PDF redaction, PDF-to-Excel extraction, and DOCX templating editor.
- Set up CI/CD with GitHub Actions to auto-build and release installers (Windows auto-update).
- Built with heavy, supervised use of AI (Claude) for a fast iteration workflow.

Full-Stack Web App · Business Admin Tool

July 2024 – Present

- Admin dashboard for a lottery business: bulk QR generation for slides, sitemap generator, page editor, and training page. Improving business efficiency.

Education

Universidad de Vigo · B.Sc. in Software Engineering

September 2021 – June 2025

- Thesis: games platform focused on UX/UI polish and complete account features. Independently planned the project and documented it in LaTeX. imprffctgames.com

The Power Business School · Web Development Bootcamp

2023 - 2024

- Consistently exceeded expectations in functionality, UX, and attention to detail across every project; like my weather app design weatherdelta.vercel.app.
- Developed a strong foundation by building in plain JavaScript rather than starting with a framework; e.g. a custom SPA router.

Exchange semester · Poland

February 2024 – June 2024

Honors Baccalaureate (STEAM Track) · Passive House project

Languages

English - C1 (Cambridge) Spanish - Native Galician - C1

Principles

Attention to Detail Ownership User-Centered Design Pragmatism
